

**How to reproduce the results presented in the article “Optimal dose of second-generation antidepressants in major depression: Systematic review and dose-response meta-analysis” by Furukawa et al.**

The results from the main analysis and the sensitivity analyses are included in the folders “Results from main analyses” and “Results from sensitivity analyses” respectively.

To reproduce these graphs and numerical results go through the following steps:

1. Go to folder R scripts and data
2. Double click on `Dosres.Rproj` file [you need to have RStudio installed, obviously!]
3. From within RStudio open the file `MASTER file for dose-response analysis.R` and run it.
4. The graphs and text output in the form of .PDF and .txt files should now appear in the folder R scripts and data.
